Introducing CST's new Permeable Paver

CST's Permeable Paver, as the latest environmentally-friendly hardscape product from CST, provides sharp styling and optimum protection against storm water run-off, allowing for the readmission of water into the ground and the natural re-charge of the aquifer.

Plus, CST's Permeable Pavers help protect the environment from dangerous pollutants in storm water run-off. Permeable Pavers, with their beautiful unique shape, versatile design and superior permeability, are the ideal solution for eco-friendly hardscape design and optimum aesthetic appeal.

The Permeable Paver System delivers a sturdy pavement designed to handle both pedestrian and heavy vehicular traffic because of its hub-spacer bar. Unlike many other products with over-sized spacer bars that allow the pavement to "creep" and joint lines to skew, Permeable Paver's hub-spacer bars ensure a positive connection with maximum interlock. From streetscapes and parking areas to residential applications such as driveways and patios, CST's Permeable Pavers with their unique shape and versatile design are the ideal solution for eco-friendly hardscape design and aesthetic appeal.
